EDUCATION

The University of Texas at Austin

Masters of Science in Computer Science (GPA- 3.9)

Austin, TX

August 2022 - May 2024

The University of Texas at Austin

Bachelor of Science in Computer Science (GPA- 3.9)

Austin, TX

August 2019 - May 2022

- Relevant Coursework: Natural Language Processing, Robot Learning, Reinforcement Learning, Distributed Computing, Boolean Analysis

EXPERIENCE

AI/ML Engineer Intern

Zadar Labs (Startup - building better radars)

May 2023 – August 2023

San Jose, CA

- Overhauled a camera-radar object depth completion algorithm achieving a 10x speed improvement with real-time performance at up to 180 FPS, completed for tight demo deadlines.
- Adapted a state-of-the-art unsupervised learning object detector from LiDAR for radar applications, laying the groundwork for the company's first large scale deep learning dataset.
- Initiated and edited product photos and videos, resulting in the first company LinkedIn posts and several new videos with 100,000+ impressions.

Software Development Engineer Intern

Amazon (AWS EC2 - migration services)

May 2022 – August 2022

Santa Clara, CA

- Designed and iterated the first prototypes for a new customer-facing tool for automatic Docker container generation for Machine Learning workloads.
- Created workflow to automatically detect on premise third-party packages and version sets, porting it to AWS EC2 and AWS SageMaker.

Research and Development Intern

Sandia National Laboratories

May 2021 – August 2021

Albuquerque, NM

- Developed a real-time embedded gamma ray sensing subsystem to determine anomalous radioisotope events via ensemble nets on a Pi with RabbitMQ and PostgreSQL.

PROJECTS

Baba Is RL | Python, Pytorch

Summer 2024

- Task cumulative learning PPO and DQN agents for the game Baba is You.
- Extended simulator for reinforcement learning tasks and procedural generation of different size levels.

Low-Rank Adaptation of Large Language Models Reproduction Study | Python, Pytorch

Spring 2024

- Finetuned and evaluated RoBERTA with a from scratch LoRA, LoRA-FA, DoRA, VeRA, QLoRA, and custom variants on GLUE to benchmark LoRA variants.

Multi-task Behavior Transformers | Python, PyTorch

Fall 2022

- Extended Robot Behavior Transformers to the multitask and transfer learning setting, achieving up to 20% improved accuracy on harder tasks with positive transfer effects in robomimic benchmarks.

Valorant Team Manager | AWS Bedrock, S3, Python, React

Fall 2024

- Lead team to create a Bedrock Native Agent for automatic data analysis on Valorant players.

WeLikeSportz.me | Python, JavaScript, PostgreSQL, Selenium, AWS, Docker

Fall 2021

- Led and designed a backend Flask service providing dynamic, live sports team information via RESTful API by caching web scrapes and using multiple APIs (Youtube, Wikiedia, SportsDB, and Back4App).

Distributed Key-Value Store | Python, Kubernetes

- Strongly consistent primary-backup KVStore with per-key locking and heartbeating for failures.

SKILLS

Languages: Python, Go, C++, Java

Technologies: PyTorch, HuggingFace, Docker
